1 Includes cadaver organs, living related donors and living unrelated donors.

2 Data are subject to change based on future data submissions or corrections and may vary from data previously published.

3 Number of kidney transplants may be less than the number of kidney donors because of double kidney transplants. 18 transplants resulted in double kidney transplants.

4 Number of liver donors may be less than the number of liver transplants because of split liver transplants. 5 donors resulted in split liver transplants.

5 Liver transplant recipients from the Atlantic region (n=23) had their surgeries performed at London Health Sciences Centre in Ontario.

6 The number of pancreas islet donors may be less than the number of pancreas islet transplants because preserved islet were used.
