

CIHI Portal Release Notes: Release 12.14

Overview

The highlight of CIHI Portal Release 12.14 is the release of new and refreshed Canadian MIS Database (CMDB) data in the ad hoc Portal CMDB project.

CMDB environment update

Data coverage

5 fiscal years of data are included in this release: 2011–2012 to 2015–2016. Because the project holds 5 years of data, fiscal years prior to 2011–2012 are no longer available.

This release refreshes the 2011–2012 and 2012–2013 data years and adds the 2013–2014 to 2015–2016 data years.

Coverage includes all provinces and territories except Quebec and Nunavut.

Data components

30 indicators have been updated to reflect their most current definitions. A total of 68 metrics were affected by these updates.

4 indicators and their components (a total of 10 metrics) have been retired. While these metrics will no longer be available for new reports, existing reports containing these retired metrics will continue to generate results.

1 indicator and its numerator and denominator have been renamed: Referred-Out Services to Direct Operating Expense is now called Contracted-Out Services to Direct Operating Expense.

Please refer to the CMDB Metadata document on the [CIHI Portal Support web page](#) for further details on all of these updates. CIHI Portal users with questions about CMDB data methodology or interpretation should contact CIHI's Financial Standards and Information team at fsi@cihi.ca.

CMDB eReports

We did not make any changes to the CMDB eReporting product. There are 3 groups of reports in CMDB eReports:

- **MISnapshot:** This interactive application provides you with a concise snapshot of a health service organization's key metric/indicator values, a time-series depiction of changes in these values and a comparison of these values with ones from similar organizations.
- **MISpheres:** This multi-dimensional interactive application provides you with a visual representation of the relationship between metric values of different health service organizations in different functional centres over time (over a 5-year period). You can select and display 3 different metrics for a particular organization and functional centre combination at a time.
- **Custom reports:** This more flexible analysis tool allows you to select an indicator, fiscal year, peer group and attribute for 4 different reports:
 - MIS MacroMetric: Organization Analysis
 - MIS MacroMetric: Functional Centre Analysis
 - Summary MacroMetric
 - Summary MicroMetric
