Group 19 Licensed Vendor Assigned Values															
19/01–25	Licensed Vendor Assigned Values	Facilities with vendor grouper software will have these licensed vendor assigned values automatically populated according to the CMG+ and CACS grouping methodology.	O	NA	M	M	NA	NA	M	O	NA	O	O	O	O

Licensed Vendor Assigned Values

Table 3 DAD Data Elements 2018-2019 — Group 19 Licensed Vendor Assigned Values

Facilities with vendor grouper software will have these licensed vendor assigned values automatically populated according to the CMG+ and CACS grouping methodology.

Vendor assigned values are mandatory in New Brunswick, Nova Scotia and Manitoba.

Group/Field	Data Element Name	Description
19/01	MCC	A Major Clinical Category (MCC) is a large grouping of diagnoses generally related to a body system, specific conditions, or trauma.
19/02	CMG	A Case Mix Group is a numbered cell/group to which an acute care inpatient is assigned. CMG+ is a CIHI grouping methodology that categorizes acute care patients into groups based on similarities of diagnosis and/or interventions, length of stay (LOS) and resource use.
19/04	RIW	Resource Intensity Weight (RIW) are cost weights that are relative to the average cost of a typical acute inpatient case.
19/06	Grouping Vendor ID	The ID number of the vendor.
19/07	CMG Age Category	The CMG Age Category is the alphabetic age group code that represents the age group and category to which the case is assigned for RIW calculation.
19/08	Comorbidity Level (CL)	The CL is the cumulative resource impact of various comorbidities on the patient's stay and resource consumption.
19/10	Intervention Event Count	An intervention event is a visit by a patient to an operating room or procedure suite for at least 1 intervention on the CCI intervention partition codes list.
19/11	OOH Factor Count	Indicates whether the patient had a specific intervention outside of the admitting institution.
19/12	RIW Atypical Code	A measure used to determine a patient's typical or atypical status for the calculation of RIW and ELOS.
19/13	ELOS	The Expected length of stay (ELOS) is the length of time a patient is expected to stay in a facility as determined by CMG + methodology.

Facilities with vendor grouper software will have these licensed vendor assigned values automatically populated according to the CMG+ and CACS grouping methodology.

Vendor assigned values are mandatory in New Brunswick, Nova Scotia and Manitoba.

Group/Field	Data Element Name	Description
19/14	RI Level	Resource intensity level (RIL) was created as a single-variable reporting tool to capture complicated and resource-intensive cases beyond CMG and age. RIL measures the degree to which the final RIW value differs from the non-factor RIW of each case.
19/15	Abstracting Vendor ID	The ID number of the licensed software vendor for the abstracting system.
19/20	CACS	The Comprehensive Ambulatory Classification System (CACS) code is an outpatient grouping methodology for ambulatory data and is based on the ICD-10-CA and CCI classification systems.
19/21	MAC	Major Ambulatory Cluster is a high level grouping of the (CACS) cells generally related to body system or functional grouping.
19/22	Vendor Age Category	Vendor Age Category is the CACS age category assigned to the abstract.
19/23	Vendor Anaesthetic Category	Vendor Anaesthetic Code is the anaesthetic category code assigned by the CACS methodology.
19/24	CACS Investigative Technology Count	A distinct count of the total number of Investigative Technology categories found on each abstract.
19/25	Flagged Intervention Status	<p>The Flagged Intervention Status differs from the CIHI assignment.</p> <p>If the Vendor Assigned Flagged Intervention Status is not blank, it should be the same as the CIHI assigned Flagged Intervention Status.</p> <p>Because this is a warning message, no change was made to the data.</p> <p>The original data recorded on the abstract appears on the Submission Detailed Error File as “Original Data Submitted.” The CIHI value also appears on the report.</p> <p>The first value recorded on the Submission Detailed Error File is the Vendor Assigned value and the value following it, separated by a forward slash, is the CIHI assigned value.</p> <p>For example, if the Vendor Assigned a value of 4 and CIHI assigned a value of 1, “4/1” appears on the Submission Detailed Error File.</p> <p>For an explanation of Flagged Intervention Status, please refer to the Introduction and Flagged Intervention sections of the CMG+ Directory.</p>
